

## Waste Management

**All type of bio waste is converted in compost.**

Smart Xpress Composter has a churning system working simultaneously to crush and mix the waste matter so as to cut down on the volume and to achieve faster pre-decomposition.

The Composter is also equipped with heating arrangement which optimizes the performance of the micro organisms and accelerates the composting process.

This compost can directly be used for the field application.

**The machine that convert bio waste into organic Fertilizer is as shown below**
